Description

Documentation

Type Hierarchy

TopicType

CategorizedTopic

content organized by categories

This is a TopicType for categorization only.

See also: [ClassifiedTopic](#), [TaggedTopic](#)

... [read more](#)

Category

a classification in a field of knowledge

Categories are a kind of predefined "backbone" to organized content and facilitate navigation. Categories can be used for very different purposes. To effectively use categories you have to understand the difference to tags as they are available for TaggedTopics. So while tags are a kind of "keywords" that connect content in a per-to-per fashion, categories are a predefined hierarchy where content is situated in separate compartments.

Categories themselves are CategorizedTopics thus implementing a hierarchy.

ClassifiedTopic

content organized by categories and tags

This TopicType inherits the properties of CategorizedTopic and TaggedTopic. Take those types if you want to categorize or tag content solely.

See also:

- [ClassifiedTopicViewTemplate](#)
- [ClassifiedTopicEditTemplate](#)
- [ClassifiedTopicViewBaseTemplate](#)

... [read more](#)

ControlledTopic

content under workflow control

see also:

- [ControlledTopicViewTemplate](#)
- [ControlledTopicEditTemplate](#)

... [read more](#)

SeoTopic

a topic carrying search engine enhanced metadata

See also [SeoTopicEditTemplate](#), [SeoTopicViewTemplate](#)

... [read more](#)

TaggedTopic

content organized by tags

This is a TopicType for topics that you want to tag. If you want to categorize them also use the ClassifiedTopic type.

See also: [ClassifiedTopic](#), [CategorizedTopic](#), [TaggedTopicViewTemplate](#), [TaggedTopicEditTemplate](#)

... [read more](#)

WorkflowDefinition

defines a workflow for controlled topics

This TopicType requires [QMPlugin](#)

see also:

TopicFunction

CategorizedTopicRenderIndexItem

Render a summary for ClassifiedTopics

This method is called by RenderCategory to display a summary for an object listed within the Category topic.

Parameters

- OBJECT
- THEICON
- TITLEEXTRA

... [read more](#)

CategoryRenderCategoryItem

Render a summary for a Category in a category index

This method is called by RenderCategory to display a summary for an object of type ClassifiedTopic.

Parameters

- OBJECT
- TITLE

- THEWEB
- SHOWSUBCATS: switch on/off direct subcategoriesm, defaults to on

... [read more](#)

CategoryRenderIndexItem

Render a summary for Categories

This method is called by RenderCategory to display a summary for an object listed within the Category topic.

Parameters

- OBJECT
- TITLEEXTRA

... [read more](#)

ClassifiedControlledTopicRenderIndexItem

Render a summary for a ClassifiedTopic in a category index

This method is called by RenderCategory to display a summary for an object of type ClassifiedControlledTopic.

Parameters

- OBJECT
- THEICON
- TITLEEXTRA

... [read more](#)

ClassifiedTopicRenderIndexItem

Render a summary for a ClassifiedTopic in a category index

This method is called by RenderCategory to display a summary for an object of type ClassifiedTopic.

Parameters

- OBJECT
- THEICON
- TITLEEXTRA

... [read more](#)

RenderAllCategories

Renders an overview of all known categories

Renders an index of all known categories, top categories first.

Parameters

- NONE

... [read more](#)

RenderCategory

Render tools to handle categories

This function is called in Category topics.

See the also

- [CategoryTemplate](#)
- [CategoryRenderCategoryItem](#)
- [RenderIndexItem](#)
- [ClassifiedTopicRenderIndexItem](#)
- [RenderCategoryTiles](#)

Parameters

- CAT: category to be rendered, defaults to URLPARAM{"catname" default="BASETOPIC"}
- KEYWORDS: keywords to filter for
- TAG: tags to be searching for in this category
- EXCLUDE: categories to be excluded from the list
- SHOWHEADER: switch on/off display anchors, defaults to off
- SHOWTOPICS: switch on/off display of topics in this category; defaults to on
- SHOWGROUPS: switch on/off alphabetic headers; defaults to off
- SHOWFILTER: switch on/off the input field to filter the list items, defaults to off
- SHOWSUBCATS: switch on/off display of subcategories, defaults to on
- COLS: number of columns, defaults to CLASSIFICATIONPLUGIN_NRCOLS which itself defaults to 3

... [read more](#)

RenderCategoryBreadcrumbs

Renders a list of parent categories for breadcrumbs navigation

If no category breadcrumbs are available, standard ones are created based on BASETOPIC. All information is extracted from BASEWEB.

Parameters

- CAT: name of category to render the breadcrumbs for, defaults to BASETOPIC
- SEP: string used as a separator in the breadcrumbs

... [read more](#)

RenderCategoryBrowser

Renders a hierarchical browser for categories

Parameters

- THEWEB: where to search for categories, defaults to %BASEWEB%
- NAME: name of the formfield to store the selection (only used when MODE is set to `select`); defaults to `Category`
- VALUE: list of pre-selected categories
- TOP: node from where to start the category, defaults to `TopCategory`
- MODE: could be `edit`, `select` or `browse`, defaults to `browse`
 - `edit`: allows to modify the hierarchy
 - `select`: select one or more categories; specify the name of the formfield to be used in the NAME parameter
 - `browse`: navigate among categories
- MULTIPLE: `on`, `off` - toggle multiselect mode, defaults to `on`
- BUTTONS: `on`, `off` - toggle the display of the buttons, defaults to `on`; you may also switch on individual buttons using a comma separated lists of ids `filter`, `refresh`, `undo` and/or `clear`
- CLASSES: css classes to be applied to the input element

... [read more](#)

RenderCategorySettings

Renders the content of the settings tab in the category editor

This function is used by the rest handler to render the settings tab in the category editor

Parameters

- BASETOPIC
- TOPICPARENT

... [read more](#)

RenderHierarchyAsJSON

Renders a hierarchy as a JSON object

This function is called by the System.RenderPlugin to implement the REST handler for the hierarchy browsers.

Parameters

- web: name of the web where to extract the hierarchy from, defaults to BASEWEB
- root: top category inside the hierarchy to start extracting information from, defaults to TopCategory
- exclude: pattern of categories to be excluded from the tree
- depth: number of levels to extract, defaults to 2
- format: one of "browser", "sidebar", or "editor", defaults to "browser"

- open: categories to be expanded
- hidenull: hides empty categories
- nrleafs: list of `cat : count` items that specify the number of leafs per category; these values are used instead of computing them by HIERARCHY itself
- nrtopics: list of `cat : count` items that specify the number of topics per category; these values are used instead of computing them by HIERARCHY itself

... [read more](#)

RenderKnownCats

Returns a list of categories

This function is used in the category selector's autocompletion textboxlist to return a set of matching categories given the prefix in the url param `q`. See the `classificationplugin.tpl` template file.

Parameters

- CAT: pattern of categories to include, defaults to neutral filter; this pattern is to match the *prefix* of the category name
- LIMIT: maximum number of categories to return, defaults to 10
- THEWEB: web from which to extract category information, defaults to BASEWEB

... [read more](#)

RenderKnownTags

Returns a list of tags

This function is used in the tag editor's autocompletion textboxlist to return a set of matching tags given the prefix in the url param `q`. See the `classificationplugin.tpl` template file.

Parameters

- TAG: pattern of tags to include, defaults to a neutral filter; this pattern is to match the prefix of the tag name
- LIMIT: maximum number of categories to return, defaults to 10
- THEWEB: web from which to extract category information, defaults to BASEWEB

... [read more](#)

RenderKnownTagsSolr

returns a list of known tags using SolrPlugin

This function is used in the tag editor's autocompletion textboxlist to return a set of matching tags given the prefix in the url param `q`. See the `classificationplugin.tpl` template file. This in essence is functionally equivalent to RenderKnownTags however is using System.SolrPlugin if installed for better performance.

Parameters

- TAG: pattern of tags to include, defaults to a neutral filter; this pattern is to match the prefix of the tag name
- LIMIT: maximum number of categories to return, defaults to 10
- THEWEB: web from which to extract category information, defaults to BASEWEB

... [read more](#)

RenderSolrTagCloud

Renders a tag cloud using Solr

This renders a tag cloud getting tags from a solr search on recently changed data.

Parameters

- DAYS: number of recent days of changes to take under consideration, defaults to unlimited
- RECENCY: maximum number of topics to harvest tags from, defaults to 100; a value of "all" will render a tag cloud considering all matching documents
- LIMIT: maximum number of tags in the cloud, defaults to 100
- MIN: minimum frequency of a tags to be shown
- TAG: comma separated list of tags to be searched for in the archive; tags may be preceded with a dash (-) to exclude results containing this tag
- CAT: comma separated list of categories to search for; categories may be preceded with a dash (-) to exclude results containing this tag
- KEYWORDS: keywords to filter for
- THEWEB: web to restrict search to, defaults to all
- TYPE: content type to restrict results to, e.g. "topic" (default), "image", "video", "pdf", "zip", ..., defaults to "topic"
- SEARCHTOPIC: search topic, defaults to WebSearch

... [read more](#)

RenderTopicsOfCategory

renders topics of a category groupd by type

see also:

- [RenderCategoryTiles](#)

Parameters

- cat
- web
- showfilter

... [read more](#)

RenderUncategorizedTopics

list all topics not categorized yet

List all topics that are not filed into any category. Technically they are direct decendance of the TopCategory.

See also [RenderUntaggedTopics](#).

Parameters

- THEWEB: the web to search for, defaults to %BASEWEB%
- EXCLUDE: regular expression of topics to be excluded, defaults to WebTopicEditTemplate

... [read more](#)

RenderUntaggedTopics

list all topics not categorized yet

List all topics that are not tagged. See also [RenderUncategorizedTopics](#).

Parameters

- THEWEB: the web to search for, defaults to %BASEWEB%
- EXCLUDE: regular expression of topics to be excluded, defaults to UncategorizedTopics|UntaggedTopics|WebTopicEditTemplate

... [read more](#)

RenderWebTagCloud

Render a tool to list all classified topics in this web

Parameters

- TAG: comma separated list of tags to be searched for in the archive
- CAT: restrict tag cloud to this category; displays all tags of all categories if unspecified
- MIN: minimum frequency of a tags to be shown
- LIMIT: maximum number of tags in the could, defaults to 100
- TOPICTYPE: limit search for tags of topics of the given type, defaults to TaggedTopic|ClassifiedTopic
- THEWEB: web to restrict search to, defaults to current

... [read more](#)

RenderWorkflowEmail

uses sections plain_text and html_text from calling topic

Parameters

- topic

... [read more](#)

RenderWorkflowInfo

renders an info block at the top of a ControlledTopic
This TopicFunction renders the header of a ControlledTopic.

Parameters

- OBJECT the topic to render the info block for

... [read more](#)

TaggedTopicRenderIndexItem

Renders an index item for TaggedTopics
This method is called by RenderCategory to display a summary for an object listed within the TaggedTopic.

Parameters

- OBJECT
